

# Frontend Developer Candidate Assignment

**IMPORTANT: You have 5 working days to finish the assignment.**

## How to submit:

1. Add your work to a private git repository on bitbucket.org
2. Grant read access to user 'evision-recruit' to your repository
3. We will review your work and contact you in maximum 1 week

## Assignment

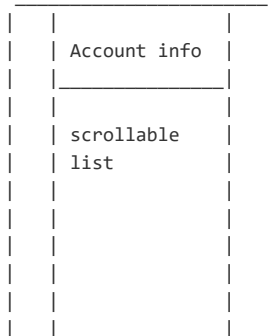

Build a working (simple) web app that can display the balance result from the provided api server. this includes:

- The account info.
- List of credits and debit items.

## Requirements

- The app should take all screen height.
- The content should be horizontally centered.
- Only the list of credit and debits should be scrollable.
- The app should work in all major browser (latest version)

example UI:

You can run the provided api server by running:

```
node apiserver/server.js
```

```
'http://localhost:8080/api/getbalance' // will return the account info + credit and debit items
```

## Considerations

- The provided api server will not always return a successfull result, be aware of this!
- Make it easy to build and run.
- Tests are considered a plus.
- You are free to use any 3rd party components, but if you do, please provide some reasoning for it.
